

CS 1XC3 : GitLab instructions

Winter 2026

Instructor: Allison Lahnala

Originally Created by Dr. Nicholas Moore

1 Instructions

For this and all future assessments, you will be required to submit your work through the department's gitlab server.

- The server is located at <https://gitlab.cas.mcmaster.ca>. Your login credentials are your CAS login credentials, which should be synchronized with your MacID. If not, you can manually sync them here: <https://www.cas.mcmaster.ca/account/>

Computing and Software GitLab Ultimate Edition

Use your CAS account to sign in, you can reset your CAS password at <https://www.cas.mcmaster.ca/account>

Use this link if you don't know your CAS password, it will be set to your MacID password: <https://www.cas.mcmaster.ca/macid>

Sign in

Figure 1: Sign in screen for CAS only!

– **If you are unable to login by Monday, Jan. 11th, please contact your TA Andrew @ bovbela@mcmaster.ca**

- Once logged in, create a new **private** repository, named **CS1XC3**. Each major lab will have a separate directory within this repository.

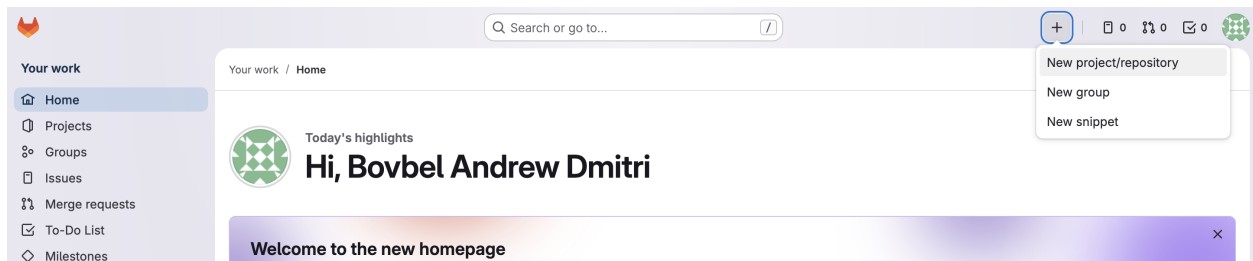

Figure 2: Find + in top right nav bar, and click on New project/repo

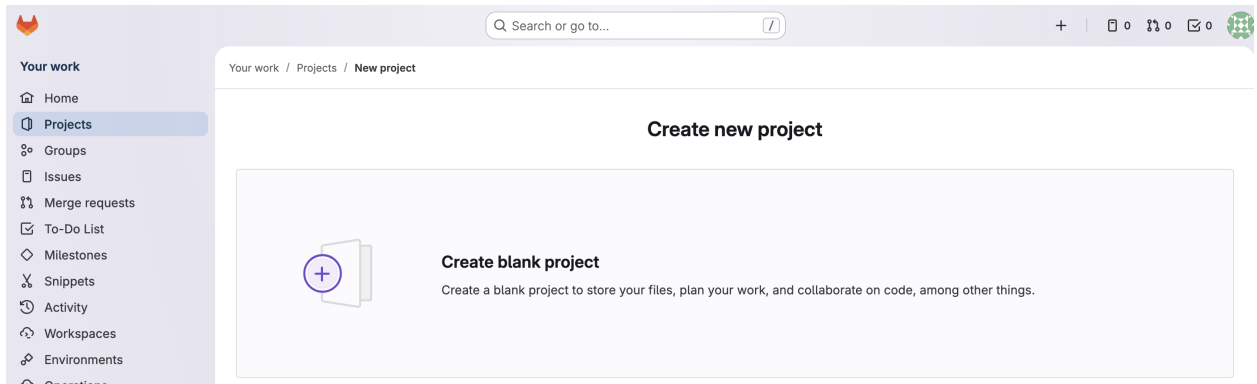

Figure 3: Click on Create blank project

Figure 4: Make sure each field is filled out correctly, and it is private

- It is highly important that your files and folders follow a strict naming convention. Please use directory names as given. The number of major labs is expected to be 5. The following convention will be used:
 - * Major lab folders shall be named **ML1**, **ML2**, **ML3**, **ML4**, **ML5**.

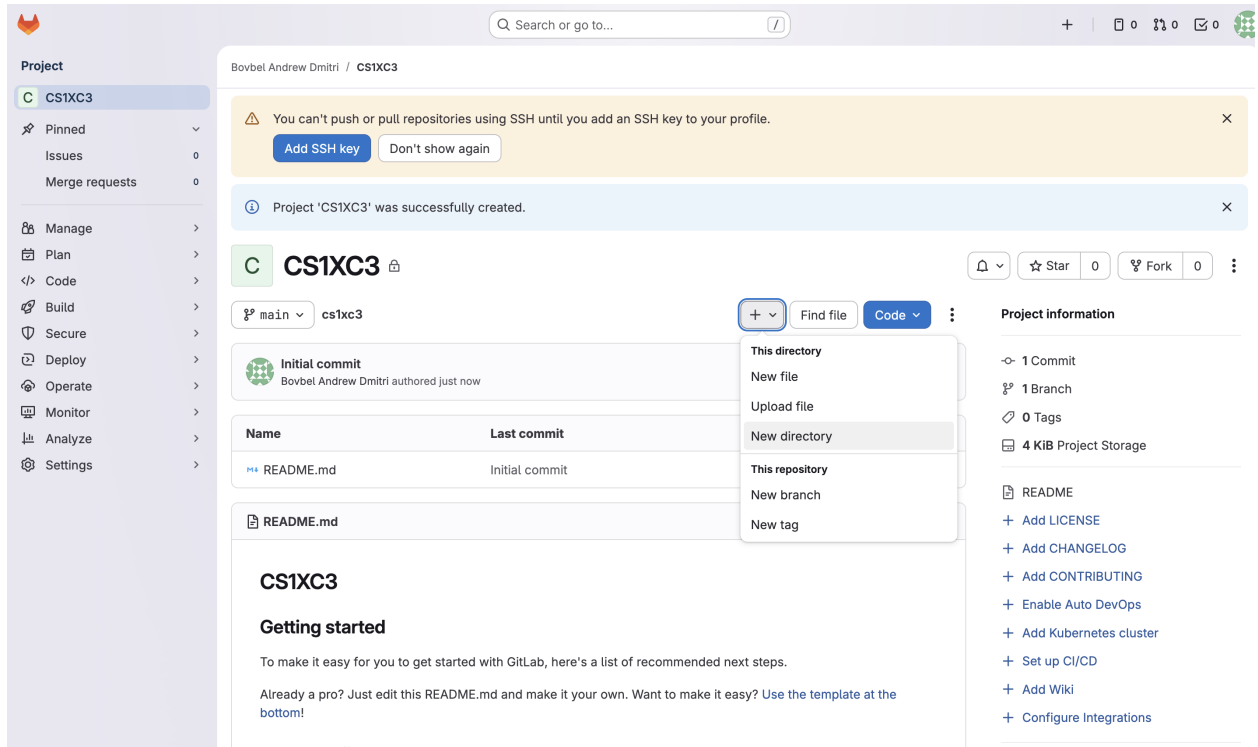

Figure 5: Click on +, then new directory

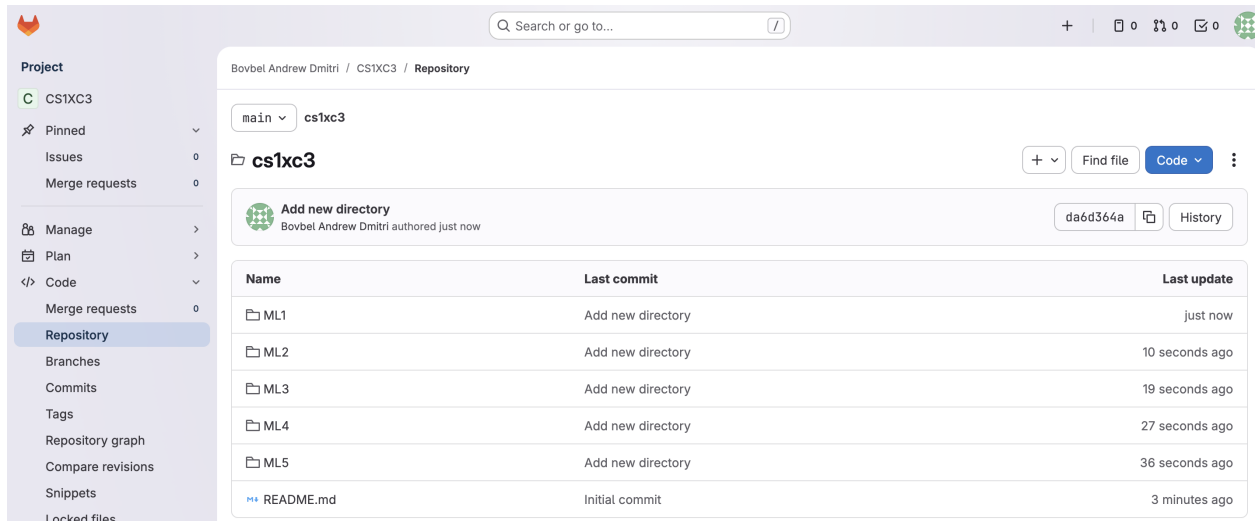

Figure 6: Do this 5 times, for each major lab. Commit each time via the user interface.

- It is critically important that your submission repository remain private at all times. Failure to keep your submission repository in a private state may result in a charge of academic dishonesty.
- In order for us to collect your submissions, it is necessary that all instruction staff Professor Lahnala ([lahnalaa](#)), Andrew ([bovbela](#)), Imran ([chowdi13](#)), Nicholas ([zajkeskn](#)), Vanessa ([laiv3](#)), Mohammad ([mahbom2](#)), Kumar ([jhak1](#)) are added as **maintainer or developer (NOT a guest)** to your submission repository.

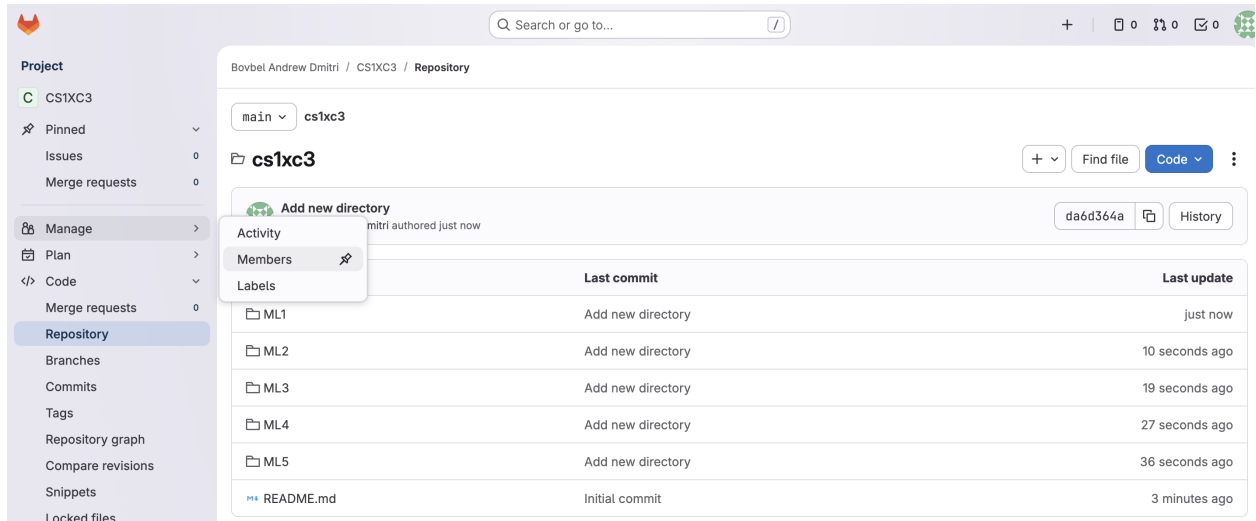

Figure 7: Click Manage (with the users icon), and then Members

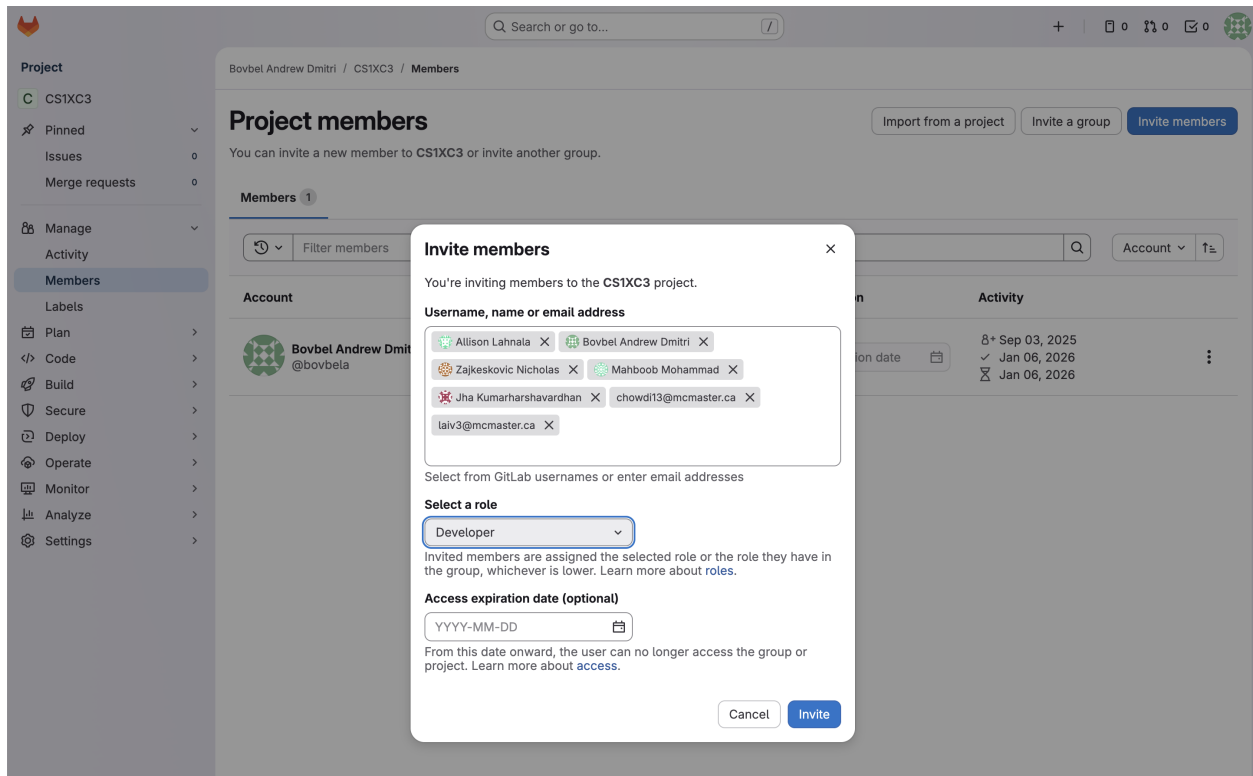

Figure 8: Click Invite Members (in blue) in the top right, and then add everyone from the list above.

- **Cloning your repository onto your local machine (first-time setup).**

Once your repository is created on GitLab, you should “clone” it to your computer so you can work on files locally (in VS Code, an editor, etc.), then push your work back to GitLab.

- **Step 1: Copy the repository URL from GitLab.**

On your project page (your **CS1XC3** repository), click the blue **Code** button. Copy the **HTTPS** URL (recommended for beginners).

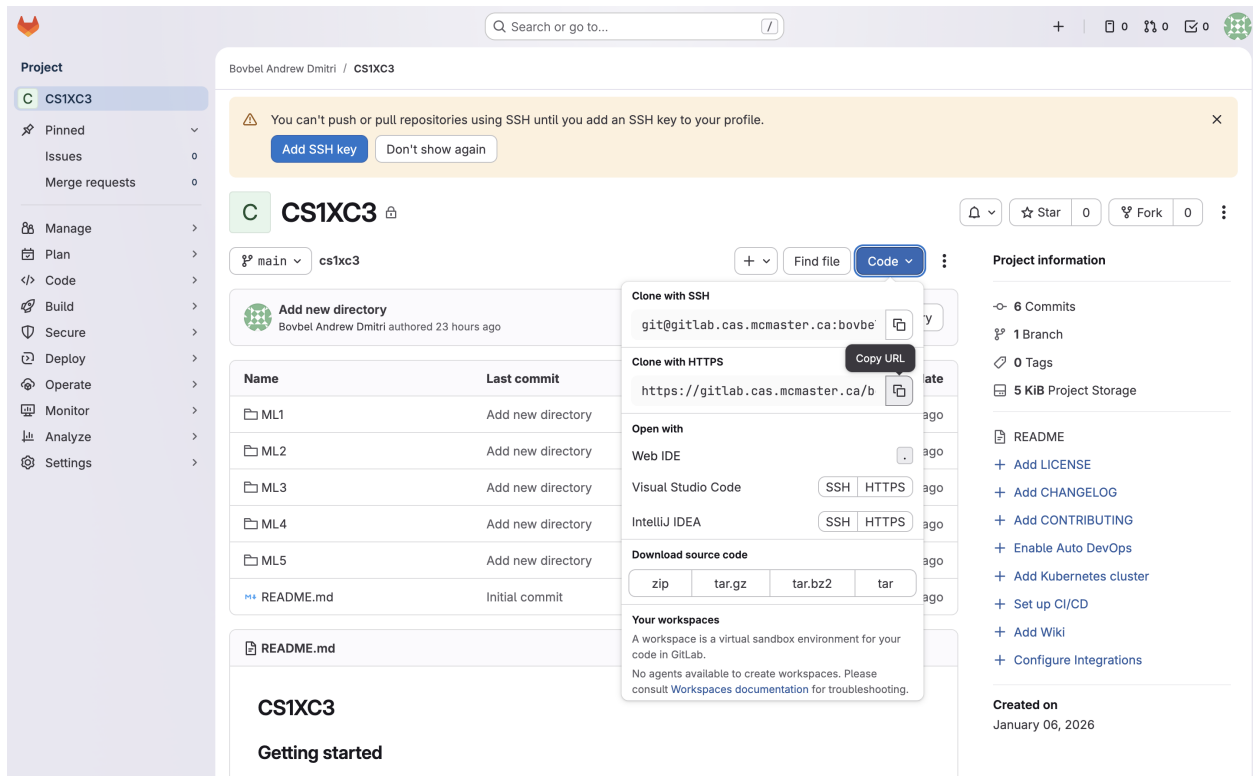

Figure 9: Where to find the code button

- **Step 2: Open a terminal and choose a folder to put the repo in.**
For example, you can put it in your home directory or in a **Documents** folder.

```
# Example: go to your home directory
cd ~

# OR (example) go to Documents
cd ~/Documents
```

- **Step 3: Clone the repository.**
Run **git clone** using the HTTPS URL you copied.

```
git clone https://gitlab.cas.mcmaster.ca/<your-username>/CS1XC3.git
```

- **Step 4: Enter the repository folder.**

```
cd CS1XC3
```

- **Set your Git name and email.**
Do this once on your machine so your commits are correctly attributed.

```
git config --global user.name "First Last"
git config --global user.email "yourmacid@mcmaster.ca"
```

- **Step 6: Verify everything worked.**
You should see that you are “on branch main” (or **master**) and your folder is ready.

```
git status
```

- **Step 7: Open the folder in VS Code (if you use it).**

```
code .
```
